Redcliff Draws With Drumheller Miners

No Score Game Played Here
Labor Day

Football fans were treated to an excellent exhibition of the game as it should be played when they witnessed the game here on Labor Day between the touring Drumheller Miners and the local all star team.

The game ended in a scoreless draw and from start to finish was one of the most evenly and stubbornly contested of the season.

At no stage of the game could it be said that either team had the best of the argument, so evenly were the teams matched and so well did every one of the 22 players perform his part. True some good chances were missed by both forward lines to score but this was largely accounted for by the hard and close checking of both defenses and the spectacular work of both goalies.

Naturally the spectators at some stages of the game thought the home team should have scored but the same could be said of the visitors and with even a few goals by both, the game from the play should have been just the way it ended—a draw.

Some nice team work was displayed on both sides and although the tactics were considerably different each was equally effective.

The game was a hum-dinger from start to finish. There was not a dull moment throughout and the unanimous opinion was that it was one of the best of the season.

This is the second time these two teams have met. On the previous occasion Redcliff won out by a goal to 0.

After the game the visitors were entertained to supper at Van Worts Cafe and during the evening many of them visited friends in town.

High winds this morning and heavy rain last afternoon have again held up threshing operations. The wind did considerable damage to flowers, shrubs and garden stuff.

Premier Brownlee is hopeful that some change will be made in the unemployment relief as a result of his conference in Calgary with Premier Bennett on Tuesday.

Under the new Canadian National management some big reductions are being made in high paid officials whose positions are being dispensed with.

Relief to war pensioners, where less than presently granted to civilians by the municipalities, will be placed on the same relief basis as that of the municipalities.

The Department of Public Works, Edmonton, has just issued a splendid road map of the province, giving all the main highways. It is also full of valuable information for tourists or those intending taking a motor trip through the province. They may be purchased at news stands or from the department.

To Stop Unemployed From Riding Freight

Ruling Will be in Force
After Sept. 30th

Following representations made to him by officials of the four western provinces and the principal cities in support of a request for additional aid from the Dominion government in the matter of unemployment relief, Prime Minister B. E. Bennett announced at the close of a three hour conference held at the Palliser hotel Tuesday morning that the movement of transient unemployed on freight trains across Canada would be stopped on September 30th.

The Prime Minister stated that the police forces of the country would co-operate with railway officials in enforcing the order and from Cape Breton to Vancouver Island the movement of transients would be stopped.

Former Bowell Boy Dies in Hamilton

Funeral held in Medicine Hat
Monday Afternoon

The funeral of Arnold Olsen, son of Mr. and Mrs. Andrew Olsen, of Medicine Hat, formerly of Bowell, took place in Medicine Hat last Monday afternoon. Deceased who at one time taught school in Bowell, died in Hamilton, Ontario, where he had been employed with the Westinghouse company as an electrical engineer. He was 29 years of age and unmarried.

Besides his parents deceased two brothers, Sorens and Earnest, who reside in the Bowell district.

Wilt Cox, who is visiting at Podesta's, has a patent composition for making decoy ducks. They are made out of paper which he molds by hand. He has developed a splendid sample and should find a ready market for them.

SCHOOL NEWS

Enrolment in the public school this year is 225, and in the high school 45, making a total of 270 students in the whole school. There are still a few scholars who are entering late which will bring the total enrolment for the year up to 290. The teaching staff remains the same as last year but the grades have been rearranged as follows: Grade I Miss Cox; Grade II and III—Miss McWaine; Grade III and IV—Miss Singular; Grade V—Miss McDonald; Grade VI—Mr. C. Pow; Grade VII—Miss Broadfoot; Grade VIII and history, composition and geography in high school—Miss Selhorn; High School Grades—The principal.

The High School Literary Society held their organization meeting last week—and elected the following officers:—

President—Leonard Larson, Vice President—Jean Peterson Secretary—Annie Shaw; Second year representative—Emma Podesta; First year representative—June Maillard;

An ambitious program by the editorial staff is being planned it being their intention to publish a school paper this year. Officers elected were as follows: Editor in Chief—Margaret Rutherford; Associate editor—Jim Brown; Assistant editor—Beth Paille; Advertising and circulation committee—Leonard Larson, Albert Podesta and Sam Fulton.

Visitors at the first meeting were John Soukup and Dan Jensen, the latter representing the Medicine Hat News. Both visitors were former student and were called upon by president Larson to address the meeting.

It was decided to hold a session every third week of the school year and that the meetings would be open to the public. Albert Podesta and Leonard Larson have been appointed to lead the cadets this year.

Margaret Rutherford will be the special correspondent to the "Review."

Touring Miners Want Game in Drumheller

Want Redcliff Footballers to Play There Sept. 25

So anxious is he to have his football team meet Redcliff again, Manager Adams of the Drumheller touring miners, has invited our all star team here to play a game in Drumheller on Sept. 25th. As an inducement he offers a guarantee of \$50 to defray expenses of the team.

It has not been definitely decided as yet whether the local committee will accept the invitation but the Review is of the opinion that they should if at all possible as this would be a fitting climax to the long and strenuous football season we have had in this league this year. Football players have given the public an interesting and exciting program of sport for the past three months and a little holiday trip is coming to them especially since they missed the Bennett Shield trip.

Misses Jean Moore and Irene Buchholz left this week for Calgary to attend Normal.

The travelling outfit finished travelling the main highway through here, yesterday.

Mrs. Allan Jackson, of Bowell died at Bowden last week. Besides her husband deceased leaves one child.

Western Canada made a clean up in butter exhibits at the Toronto exhibition. Manitoba, Saskatchewan and Alberta took in all 132 awards.

Larson have been appointed to lead the cadets this year.

Margaret Rutherford will be the special correspondent to the "Review."

Farewell Sermon At St. Ambrose Church

Will Be Preached By Canon Western of Hat

On Sunday next, Sept. 11th, at evensong, the pulpit in St. Ambrose church will be occupied by the Rev. Canon W. C. Western, R. D., who will preach his valedictory sermon to the Redcliff congregation. Canon Western, who has been appointed rector of St. John's church, Moose Jaw, will leave shortly for that city. After the service there will be a social gathering in the parish hall to enable members of the congregation to say good-bye to Canon and Mrs. Western. The service will be at 7:30 p. m.

Junior Footballers Draw With Hat

Played Nice Game Here Last
Monday Evening

The large crowd which attended the junior football game here last Monday was delighted with the splendid game put up by both the home lads and the visitors.

The teams were very evenly matched and put up a good brand of ball. Both forward lines worked well and were only prevented from having a larger score by the excellent work of the defence.

No goals were scored in the first half. In the second period the visitors were first to locate the net but this was soon equalized by Redcliff when Podesta made a nice rush and scored unaided. The game ended in a draw, one goal each.

It was quite a shock to many ratepayers when they received their tax notes last week and saw the difference the additional five mills in the rate made on their total taxes.

Heavy Losses For Anglican Church

Crisis to be Discussed At Meeting of Laymen

The crisis in the affairs of the Anglican Church precipitated by loss of its endowment funds will be considered at a meeting of church laymen, called by Archbishop Stringer, to be held September 15th. John A. Machray, K. C. head of the investment firm which handled the endowments, is awaiting trial on a charge of theft of more than \$47,000 of monies belonging to the University of Manitoba.

Total of shortages in the different trusts is not known and auditors are still unable to say when their final report will be ready. Records are confusing and months of investigation may be necessary before the final amount is struck. It is known, however, that the losses will be heavy.

For St. John's Anglican College the shortage will total \$400,000 and it is unofficially estimated it may be almost as much as that of the University of Manitoba, which records of the court was placed at \$896,344.01.

Church committees are assuming they will have to replace revenues of between \$60,000 and \$70,000 annually.

Better Prospects For Wheat Advancing

Experts Advance Reasons For This Prediction

According to the Winnipeg Free Press total wheat production of Western Canada this year will be 426,831,000 bushels; Alberta's share is placed at 168,120,500, a satisfactory feature of this province's crop is that the grading is running unusually high.

The world price of wheat continues to remain at a surprisingly low level, although world conditions point to a considerable advance. The partial failure of the Russian crop and reduced acreage in the Australian and Argentina areas are factors pointing to an early rise. In addition, the Farm Wheat Board of the United States announces that it will hold from the market the unsold balance of wheat acquired through the stabilizing venture, until the beginning of 1933.

A large wheat crop of high quality will contribute vastly to the economic restoration of this province. Even with prices at their present level, there is a favorable offset in the fact that no crop in recent years has been produced so cheaply. Their reason for the pronounced drop in wheat prices was the shipment last year by Russia of huge supplies at any price they would bring. Grain authorities agree that the same thing will not happen this year to any extent. Disappearance of Russian competition should lead to unmitigated higher prices.

It is now reported that when Peter Variga is released from custody deportation papers will be served on him.

Six hundred Canadians who call Glasgow home, were greeted on their arrival in the City by city of St. Thomas Kelly, L.D., Lord Provost and the authorities of the city, when they arrived recently in the Canadian Pacific liner "Duchess of Bedford" for a reunion. Gathered together from all parts of Canada, and transported by special train to Montreal, the Glaswegians are making a two-comb day, during which they are being entertained by the City of Glasgow, its manufacturers, and their friends. Proceedings opened Tuesday, July 26th, when the Lord Provost, magistrates and councillors held a reception in the Art Galleries at Kelvingrove. The party, which left Montreal in the Duchess of Bedford, July 6, returns to Glasgow Saturday, August 20, in the same 20,000-ton liner.

To Check

Criminality

Scientific Treatment Of Delinquency and Crime Enlarged In England

A significant and encouraging movement has recently been launched in England in an effort to combat crime at its source. This movement is under the auspices of the Association for the Scientific Treatment of Delinquency and Crime, and has for its ultimate aim the founding of a National Institute for the prevention of crime.

There can be no question that the treatment of first offenders and of young criminally-disposed persons has much to do with the creation of the crop of criminals and the formation of habits and crime. To overcome the criminal tendencies of hardened criminals is admittedly a most difficult job, but this effort in England would appear to have in it the elements of hopefulness in that it strives to rescue the young person who is about to start out on a criminal career. Too much in the past it has been true that young people guilty of lapses against the welfare of society have been sent to prison when they might have been otherwise dealt with, and in prison have acquired confirmation and hardening of their tendencies until they have emerged as man and woman with their hands against society and with society's hands against them. In this effort to which we have alluded it is intended that there shall be clearing stations, at which first offenders would undergo physical and psychological examinations and then be given treatment in clinics or re-education camps, without loss of freedom or stain upon reputation. In this way it would seem likely that many will be saved from a life of crime to useful citizenship.

Along such lines it would appear that there would be genuine likelihood of preventing the drain upon society's resources involved in the imprisonment of criminals, at least a certain proportion of whom would be re-established to good living. The experiment deserves all encouragement and is backed in England by great names of scientists and publicists. This experiment overseas should be observed by our Canadian authorities who have power to deal with the prevention of crime—Regina Leader-Post.

Monkeys Are Neither

Bipeds Or Quadrupeds

Four-Handed Like Bridge Game Says London Courier

How many feet has a monkey? The question arose when a shipment of six of the chattering primates arrived at Folkestone from the continent. British tariff law admits quadrupeds without duty; the animals are taxed.

"Monkeys have four feet," the Londoner from within the animal were assigned argument.

"No," ruled customs agents, "they have two feet and two hands." So they were taxed as bipeds.

Protesting against it, M. Customs agents' deficiency in zoological knowledge, the consignees appealed to the board of customs in London.

This stage board confounded them all.

"None," Monkeys, they affirmed, are quadrumanous (four-handed, like a bridge game).

So the poor monkeys haven't a foot to stand on, and neither has the appellant.

Wood-Pulp Production

Over three-quarters of the wood-pulp produced in Canada in 1930 was manufactured and used in mills which use their own pulp for the production of paper. About twenty-one per cent of the total quantity of pulp produced was made for export.

One thing that always has puzzled us is why these tricks remind us that "pure" dandruff, etc., etc. with "a single application," come in such large bottles.

In Oregon a loser in a gambling game can sue the winner and recover double the amount he lost.

Branded-Beef

Sales Of Well-Finished Beef Have Been Greatly Boosted

The current lines of the livestock and meat trade have been prepared by the market intelligence service of the Dominion Livestock Branch at Ottawa, and are some strikingly agreeable with respect to the extent to which sales of well-finished beef have been boosted through branding as provided under the federal beef grading service.

For the first four months of 1931 sales of branded beef are reported as totalling 5,032,396 pounds, while for the first four months of 1930 the total is 3,047,598 pounds—a increase of 2,014,989 pounds, or 40 per cent.

Another way of presenting the same figures is to compare the increase in terms of head of beef cattle, which, allowing an average dressed weight of 600 pounds each, amounts to 3,355 head.

It is also of interest to note from this report that the volume of beef branded in Quebec packing-houses, chiefly in Montreal (1,430,017 pounds), in nearly two-and-a-half times the amount branded during the first four months of 1931. This figure, however, does not begin to represent the actual volume of beef branded, but being sold in Montreal as a great deal of the Montreal supply is dressed at Toronto and Winnipeg stockyards.

Statistics of beef grading service estimate that about 30 per cent of all the beef being branded finds a market outlet in Montreal. This places the Montreal share at upwards of 2,100,000 pounds.

While the province in Canada in which beef is branded shows an increase in volume over last year, the province in which the greatest volume of beef is sold, in Manitoba, which shows a gain of around 500,000 pounds during the first four months of the current year.

Movie Wind Machine

Combats Bush Fires

Is Capable Of Putting Out Small Blazes Quickly

Blowing out of the sky as easily as a person might sniff out a match, a powerful wind machine, developed for a Hollywood motion-picture studio, is being used successfully in combating forest fires by the Los Angeles county forestry department.

This proved that the machine is capable of putting out any small blaze quickly, but results being obtained with dirt and sand were also being used to smother the flames.

The wind machine may be particularly valuable where no water is available and, if mounted on a tractor, could be taken into heavily overgrown territory, says Popular Mechanics Magazine. It is also proposed to direct the blast of air through a hose of magic into the heart of the fire, blow out by the roots brush and dry grass to cut fire breaks.

Recipe For Keeping Young

Be Keenly Interested In Everything Says Henry Ford

Henry Ford at 69 believes that if he has been used to "keep interested in everything," old age will not bother him.

Celebrating his 69th birthday a few weeks ago, he said he believed that "people whose interests are up to date will get along in the world," without growing old.

"We like to have people think we get better as we get older," said Mr. Ford, "and I believe people of these times have more varied interests to keep them young."

The motor manufacturer expressed the belief that business conditions will gradually improve as people do more for themselves and cease looking to the Government or some State Cause for aid.

Winds Get Their Turn

Recently the last river mail boat on the Mississippi closed five years of continuous service between Memphis and Mayfield, Tenn. The same day a post-office bulletin called attention to the fact that 15,000 pounds—50,000 pieces—of mail had been sent via air during the first year of air mail at Memphis. The waters receive a well-deserved rest, but the winds are just beginning to work.

"I have only ten minutes and I hardly know where to begin," said the speaker.

"Begin at the ninth minute," shouted a bored man in the back of the audience.

Young lady wants to know why a young man who is attentive to a girl is called her suitor. He is called her suitor because he may or may not.

Manitoba had 166,000 sheep at the end of last year, Saskatchewan had 208,000, and Alberta, 614,000. Total 984,000.

Magicians Of The Past

Shoppers' Illusions That Mystified Crowds Of A Former Generation

Many of the most renowned magicians, who entertained crowded throngs in the last century and the earlier years of the present one, were inventors of no mean ability. Kotlar, Hierman the Great and, later, Thurston made the machinery which they employed in the most puzzling of their illusions. Thurston spent years in perfecting the "Leviathan Lady," in which a young woman appeared to be suspended in the air.

The trick of the speaking head, in which the head of a girl, severed from the body and floating in space, continued to carry on conversation, took years to bring to complete success, yet it also was of simple construction. Magicians are a clanish lot, and they keep as sacred trusts their own secrets and those of members of their guild. That these secrets become known to the world is not because they are intruded in the Patent Office, but because some one eventually proves as smart as the inventor.

One of the striking features of a travelling show in the '50s was the "Talking Automaton," a wax figure in a glass case that answered questions and solved mysteries. It was the show's most successful attraction and brought down the wrath of a competing combination which referred to it as a "ventriloquistic fake." If the contriver of the trick really had discovered, as he claimed, the "secret of artificial speech" he might have shared honors with Edison.

What he did was to conceal a dwarf between the two layers of the front of the case and make him the mouthpiece of the trick.

One of the illusions of another magician of the age was to raise a flaming wand and cause the ceiling of a theatre to blaze with "luminous stars of the firmament." He was himself credited to know the value of phosphorus as a showman's helper. Magic has lost much of its vogue as an entertainment. Science does on a grand scale what the magician did on an exhibition of mystery. Compare the talking automaton with the phonograph or the radio; compare the phosphorus wand with the phonograph; compare the flaming wand with the hundreds of thousands of lights in the modern magic display. The magic days are over, and that is of short duration.—New York Sun.

Grain Storage Facilities

Saskatchewan has 3,229 country elevators with a total capacity of 102,162,250 bushels, and two interior grain storage elevators which will hold 11,000,000 bushels. Private elevators in the province hold 4,900,000 bushels.

A youngster in school was asked: "Where are elephants found?"

"Elephants are so large that they never get lost," was his answer.

"And that could apply to the advertising business without straining one's imagination too much."

She: "We've been waiting a long time for my mother."

He: "Hurry, I should say."

She (regretfully): "Go, George!"

Italian Heir Likely

To Receive Fortune

Count Max Rocco In Courts For Sixty-Five Years

To inherit a million in money left by an ancestor 332 years ago does not fall to the lot of every man.

In the year 1600 Baron Antonio Trombetta, who had vast funds at Montebello Jonio, in Calabria, left them all in trust to neighboring Capuchin monks, founded an abbey for them and gave them his farm buildings too. It seems that the baron had quarrelled with his family, which consisted of a mother who had married and her two sons by her second husband.

When, in 1866, the monasteries were in a great extent secularized, the baron's fortune, which had increased a hundredfold, was not claimed by his kin and the Italian government, according to law, took possession of it.

Then the descendants of the baron's brother, who had grown poor, and come down to the humblest class of society, appeared and made their claim. There were there 70 persons, but the courts weeded them out to 40 and now the heir heir is Giovanni Trombetta.

The money will soon be handed over to him, but the state kept a considerable portion of the whole estate which was being carefully nursed by the Abbots at Montebello Jonio for the benefit of a poor postal employee.

Educated In Many Places

Daughter Of U.S. Consul Has Done Much Travelling

Mary Marsh, daughter of the United States consul at Sydney, New South Wales, should be internationally known for the amount of travelling between terms at school, but not in the stereotyped manner of students out-and-dried world cruises.

Mrs. Marsh was born at Manila, Philippines Islands; attended grammar school at Ottawa, high school in the United States, was privately tutored in Mexico, attended a ladies' institute in Montevideo, Uruguay, and graduated from high school in Sydney. She then entered Dalhousie University, for two and one-half years of university attendance. But she will graduate from the University of Strasbourg, Germany. Her father, C. Gaylord Marsh, has been appointed to the consular post at that historic city.

A novel clock in a South American city is in the form of a searchlight. The clock, in revolving, falls on a different landmark every hour.

Nearly two-thirds of the artificial flowers exported last year, the "United States last year came from Germany.

Only about one American male out of every 200 attains a height of six feet.

Paint exposed to the weather ordinarily lasts about five years.

All-Canadian

Highway

Completion Is Expected In About Two Years' Time

Franchising the gospel of the vital need of good roads, everywhere in Canada, Samuel L. Square of Toronto, president of the Canadian Good Roads Association's executive committee, visited Edmonton recently returning from the Pacific coast.

"In two years' time Canada will be able to travel across the Dominion on an all-Canadian Highway with the exception of a short break for the lake journey from Fort William to the Soo," Mr. Square said.

"It has been a tremendous task, cutting through and preparing a highway in northern Ontario, particularly from Kemora on to Fort William. But progress is being made."

Mr. Square, told of the great aid given the association by governments in all the provinces. Recently, too, Newfoundland has joined the organization. Everywhere the necessity of preparing good roads, for the comfort and pleasure of the tourist, is rapidly becoming a fact.

"Co-operation is undoubtedly the big need today, not only between the various provinces of Canada, but between the provinces and the federal government, and the necessity of preparing good roads, for the comfort and pleasure of the tourist, is rapidly becoming a fact."

"It is a different now. With good roads leading right to the farm doors the farmer is just as familiar with city affairs as the citizen and the people living in the cities are just as familiar with conditions in the country."

Vancouver Grain Storage

Building Big To Take Care Of Elevator Capacity To Add Cuts Of Grain

Trade

An important addition to Vancouver grain storage facilities has been decided upon and elevator capacity will be increased to the extent of 1,000,000 bushels. The cost involved in this addition to elevator capacity will be about \$750,000, and the work will be completed in the next few months.

moderation will be ready to receive grain early in October. This port will then be able to store more than 17,000,000 bushels at one time.

In recent years, with millions of bushels of grain pouring out of Algonquin and Saskatchewan, Vancouver terminals have at times been so congested that westbound traffic has been restricted.

The movement of Canadian wheat through the port of Vancouver has been a comparatively recent development, but has grown to very large proportions. Whether the opening of the new route via Hudson Bay will have any appreciable effect upon west-bound shipments remains to be seen.

It is now announced that a shipment of 4,000 tons of wheat will leave this port at an early date for delivery in Vancouver. A few months ago several million bushels of western grain was shipped from Vancouver to the Russian port.

Pendulum Observations

Pendulum observations by the Dominion Observatory, Department of the Interior, show that the mountains of British Columbia are buoyed up by abnormally light material extending down into the earth's crust for about sixty miles. The excess of gravity revealed by the pendulum on the prairie is believed to be due to an extensive underground of abnormally heavy rock.

Millionaire Hag Picked

William H. Kearns, Chicago, in life an obscure rag-collector, died a millionaire. This was revealed when a brother and sister died a \$2,000,000 bond pending disposition of the estate. Kearns, who died intestate at the age of 70, left stocks and bonds amounting to \$1,000,000.

Greece plans to construct 2,100 miles of new highways

WORLD HAPPENINGS
BRIEFLY TOLD

The Rotterdam dock, one of the largest on the Clyde, has been temporarily closed on account of decline of shipbuilding.

Divided on the common stock of Canadian Pacific Railway for the first six months of 1923 is not being paid at present.

The Church of Scotland plans to build 30 churches in Scotland in the next seven years; 10 of which will be in Edinburgh and five in Glasgow.

Representatives accompanying the Japanese Olympic team plan to buy the cabin of each athlete from their country who wins an Olympic title.

Newton, Mass., one of Boston's wealthiest suburbs, has nearly two automobiles for every family. There are 14,000 families and 23,000 automobiles.

Florus Ziegfeld, New York theatrical producer, who died recently in California, bequeathed his whole estate to Billie Burke, his widow, and Patricia, their daughter.

An air-tax was chartered from Imperial Airways by a London woman for a return flight to Chelmsford, Essex, where she placed a wreath on a grave in the churchyard.

Art and agriculture are the only creative professions in the world, says John Chekian, novelist. "By artists I mean all craftsmen who are creative," he said, "and by agriculturists I mean all those who produce and create wealth from the soil."

San Francisco's new \$40,000 opera house, the first and only municipally owned opera house in the United States, will be formally dedicated next month when war memorials.

It will open Oct. 15, with performance of Puccini's "Tosca."

Indicative, it is said, of an improved lumber output, is the protest filed with the British Columbia government by mill men against a report of logs. Loggers, however, contend that they are in a position to satisfy all demands of the mill men as well as taking care of any export trade being offered.

Britain's Unemployed

Seven and a Half Million People Depending on Government Aid. A wandering army of unemployed youths, vaguely reminiscent of the United States home army, is making its appearance in Great Britain as a result of increases in the number of jobless announced on 2,311,792.

Unemployment has again approximately one-fourth of Britain's 45,000,000 population dependent to some extent on government aid, for July 1, 1923, 10,000,000 men, women and children are existing wholly or partly on government or local relief in addition to the official total of jobless.

As a result of the latest official figures, an increase of 64,438 in the month of July, and of 94,632 in the last year, the nation's relief machinery is scarcely able to cope with the situation.

Limit To Cattle Exports

Less Than 25,000 Head May Be Shipped To England Next Year. Less than 25,000 head of cattle would be shipped to the United Kingdom next year from Canada, even if the restriction now imposed against Canadian cattle landing in Britain were lifted. This estimate was made in an interview recently by Hon. Robert Weir, Canadian Minister of Agriculture.

Reports which have gone out that the lifting of the restrictions would result in Canada shipping from 100,000 to 400,000 head annually to Britain are regretted by Mr. Weir. These reports would tend to fill the British farmer with fear that his home market would be flooded by Canadian cattle, while no such danger really exists.

A material that does not stop the ultra-violet rays from the sun, resembling glass, and not so fragile, has been made from natural gas.

Barber: "Your hair is getting thin on top sir. Have you tried our new hair tonic?"

Customer: "No, it isn't that!"

Safe-breaker at home: "I should hate to open up my own safe any more today."—Musketeer, Vienna.

Make Interesting Discovery

Canadian Scientists Gain Knowledge of Universe of Great Importance. The discovery of the neutrino, stated to be of tremendous potential importance in the scientific world, has been gained by Prof. Z. S. Porter and Dr. A. V. V. Douglas, McGill University, who returned to the university following a month's research work conducted at the Dominion Astrophysical Observatory at Victoria.

Professor Porter declined to claim full success for their achievement until he and Dr. Douglas have had time to re-study their findings. He said, however, that the results of their work would quite likely carry an upset of opinion among European scientists.

The two McGill scientists set themselves to examine the electrical fields of stars.

They conducted observations both at Victoria and at Pasadena, Cal. Only one day was spent at the latter place.

Victorian Order of Nurses

Miss Scellie To Visit Europe To Study Maternal Welfare Work. In recognition of the comprehensive programme of maternal welfare carried on by the Victorian Order of Nurses for Canada, the Rockefeller Foundation has extended to Miss Elizabeth Scellie, its chief superintendent, an invitation to visit a number of European countries within the next few months for the purpose of studying conditions of maternal welfare there.

Miss Scellie expects to sail early in September, visiting England, Denmark, Austria, Germany and Italy, and returning to Canada about the middle of December.

Winnipeg Newspaper Union

Since she first took the water she has captured all the major honors of the Upper Great Lakes freight carrier. Her records go even beyond freshwater, for she has carried single cargoes more grain and more coal than has ever been moved in any single voyage on the lake.

In 1920 the "Lemoyne" took on a cargo of 67,885 bushels of wheat, the crop of approximately 40,000 acres in land. In 21 square miles of prairie land. In May 1921 she established a world record for the carriage of coal by taking aboard 15,038 tons and carrying it to Fort William. It required more than 800 railroad cars to bring this cargo to the ship.

Six hundred and thirty-three feet long, with a seventy foot beam, a depth of twenty-nine feet and a registered tonnage of 10,480 tons the "Lemoyne" will be by far the largest ship ever to have entered Lake Ontario and will clear the way for the carrying of the great bulk of the wheat crop of the prairie to the ports of the east by water.

The "Lemoyne" along with other ships of her type will no longer be confined to the Upper Lakes; her eastern terminus will become Kingston, Ontario, and her east to west cruising radius more than one thousand miles.

During the last twelve months the Welland Canal has seen a series of new records established. Last year the S.S. Noronic, upper lake passenger liner and flagship of the Canadian Steamship Lines corporation, first established the first of the series of records when she made her first voyage into Lake Ontario and visited the ports of Toronto, Hamilton and Kingston for the first time. On that occasion over one hundred thousand people from these three cities went on board the "Noronic" and the walls of the canal were lined with thousands of people during her historic cruise. The "Noronic" at that time was the largest vessel of any type to go through the canal and remains the largest passenger steamer to have entered Lake Ontario. Her length is approximately half of that of the "Lemoyne."

Following the establishing of this record by the "Noronic" plant upper lake freighters of the Canadian Steamship Lines set three new marks for

Largest Grain Carrier

Boat That Is the Pride Of Canada's Inland Waterways.

World's largest grain carrier, holder of all Great Lakes freight records and pride of the inland waterway, the S.S. "Lemoyne" of the Canadian Steamship Lines fleet, officially opened the new Welland Ship Canal on August 6, 1923, at the ceremony was His Excellency the Earl of Bessborough, Governor-General of Canada, and delegates from all parts of the Empire, attending the Imperial Conference in Ottawa.

Designed and built by Canadian Steamship Lines at their own shipyards at Midland, Ontario, in 1920, the "Lemoyne" is the consummation of Canadian achievement and is the boat of Canadian shipbuilders. Since she first took the water she has captured all the major honors of the Upper Great Lakes freight carrier. Her records go even beyond freshwater, for she has carried single cargoes more grain and more coal than has ever been moved in any single voyage on the lake.

In 1920 the "Lemoyne" took on a cargo of 67,885 bushels of wheat, the crop of approximately 40,000 acres in land. In 21 square miles of prairie land. In May 1921 she established a world record for the carriage of coal by taking aboard 15,038 tons and carrying it to Fort William. It required more than 800 railroad cars to bring this cargo to the ship.

Six hundred and thirty-three feet long, with a seventy foot beam, a depth of twenty-nine feet and a registered tonnage of 10,480 tons the "Lemoyne" will be by far the largest ship ever to have entered Lake Ontario and will clear the way for the carrying of the great bulk of the wheat crop of the prairie to the ports of the east by water.

The "Lemoyne" along with other ships of her type will no longer be confined to the Upper Lakes; her eastern terminus will become Kingston, Ontario, and her east to west cruising radius more than one thousand miles.

During the last twelve months the Welland Canal has seen a series of new records established. Last year the S.S. Noronic, upper lake passenger liner and flagship of the Canadian Steamship Lines corporation, first established the first of the series of records when she made her first voyage into Lake Ontario and visited the ports of Toronto, Hamilton and Kingston for the first time. On that occasion over one hundred thousand people from these three cities went on board the "Noronic" and the walls of the canal were lined with thousands of people during her historic cruise. The "Noronic" at that time was the largest vessel of any type to go through the canal and remains the largest passenger steamer to have entered Lake Ontario. Her length is approximately half of that of the "Lemoyne."

Following the establishing of this record by the "Noronic" plant upper lake freighters of the Canadian Steamship Lines set three new marks for

the canal in a little over a week. Early in July this year the freighter "Abnott" went through the canal with 380,000 bushels of wheat on her way to Kingston only to see her record broken within a few days by the freighter "Glenagles" with 380,000 bushels. Both these vessels had formerly been confined to the Upper Lakes.

Less than a week after the "Glenagles" had set her new record for grain she returned to Lake Erie and brought down to Hamilton 12,010 tons of coal, another Welland Canal record which will likely stand for some time. On her latter trip the "Glenagles" also shattered all records for cargo carried into the port of Hamilton.

Today the "Glenagles" is the largest boat ever to have entered Lake Ontario, but compared to the "Lemoyne" she is a small freighter. Her length of 366 feet compared with the "Lemoyne's" 678 feet, her beam of 40 feet compared with the "Lemoyne's" 70 feet, her draft of 20 feet compared with the "Lemoyne's" 29 feet, and her speed of 12 knots compared with the "Lemoyne's" 14 knots.

Considered of special importance to the Empire since the Welland Canal in future will be the route used by most of Canada's grain ships, it was decided some time ago that the official opening should be on the programme of the Imperial Conference and efforts were immediately made to have the largest Canadian lake boat go through for this ceremony.

Elaborate preparations were made for welcoming the "Lemoyne" to Port Colborne on her first voyage and that will add to the importance of the occasion. In addition to delegates, government officials and representatives from other provinces large crowds of people viewed the ceremony.

Oldest in the World

Ancient Skull in Found While Excavating in London.

The oldest known human skull belonged to a London woman. G. Elliot Smith, professor of anatomy at the University of London, stated at a meeting of the international congress of pre-historic and proto-historic sciences.

"The skull is known as the 'Lloyd's skull', he said, 'and was found in blue clay 40 feet below the surface during excavations for the new home of Lloyd's corporation in Leadenhall Street. It belonged to a woman about 50 years old, who probably was left-handed.'

After considering all the evidence and carefully studying all other known skulls of the kind, Professor Smith said, he decided the London skull represented the earliest genuine remains of homo sapiens, giving it pride of place over the Java man, the Peking man, and all other pre-historic finds.

The other attendants at the congress expressed great surprise over the announcement and left the hall immediately afterwards to examine the skull and discuss the problem.

Do you keep your money in an old safe or an unsafe pocket? asks a male fashion writer. No.

The doctor was giving a lecture to a class of girls. "Also," he remarked, "it has been found that the human body contains sulphur!"

"Sulphur?" exclaimed a pretty young girl. "And how much sulphur is there in a girl's body?"

"Oh, the amount varies," said the doctor smiling, "according to the girl."

"Ah," remarked the girl. "That's why some of us gals better matches than others."

The King of England has conferred the Royal Victorian Chain upon the Duke of Portland.

Submarine Rendered Useless By Invention

British Admiralty Finds New Method Of Disabling Undersea Craft. The submarine, as a method of warfare, is doomed.

Unless protection against a new invention by the British Admiralty can be discovered, the submarine will be rendered useless for the purpose of fighting.

The efficiency of this new invention is so deadly that a submarine cannot hide from the largest ship which is equipped with it.

Testing experiments have been made. Half a dozen submarines were sent out 24 hours ahead of two fleets of destroyers. In six hours the destroyers had found them, and technically "destroyed" them.

Escape from the detector is futile. The use of a moving point, the operation of which is strictly guarded, the exact position, and distance of the submarine, no matter how far under the sea it is, can be unfailingly ascertained. Exhaustive tests have not yet found any way of countering the function of the detector.

Reserved For Royalty

Escort By Life Guards Is Honor For the Few.

The honor of being escorted by Life Guards is reserved for members of the Royal Family, foreign Royalties and heads of foreign states who had assumed Royal positions. The honor is a jealously guarded one. For instance, the Duchess of York, although a great lady, daughter of a noble family, was not royal before her wedding. Accordingly, she drove to the ceremony accompanied by a mounted escort of Metropolitan Police. Immediately she was married, an escort of Life Guards was by right. The regiments were formed, literally, as "Royal Life Guards," originating in two troops of cavalry who accompanied Charles II. into exile. During the monarch's stay in Holland they were organized in their present-day form.

First Gas-Lighted Street

Enterprise Launched On Pall Mall, London, England, In 1807.

One hundred and twenty-five years ago—in 1807—for the first time in history, Pall Mall, in London, England, was lit by gas. The enterprise of a German called Winsor—after changed to Windsor—was responsible. Winsor's modest estimate of the profits was £220,000 a year, out of which he proposed to redeem the National Debt, in addition to paying his shareholders 1000 per cent. His company soon died, but Winsor must be given credit for assisting in bringing gas lighting into popular favour.

According To Supply

The doctor was giving a lecture to a class of girls. "Also," he remarked, "it has been found that the human body contains sulphur!"

"Sulphur?" exclaimed a pretty young girl. "And how much sulphur is there in a girl's body?"

"Oh, the amount varies," said the doctor smiling, "according to the girl."

"Ah," remarked the girl. "That's why some of us gals better matches than others."

Naval Armaments

Difficult To Distinguish Between Defensive and Offensive Weapons.

Why all this bother about "offensive" and "defensive" naval weapons at Geneva? Is the submarine offensive? Are battleships, mine-layers and bombing planes defensive?

There is one simple rule by which every case can be decided: The other fellow's weapon is extremely offensive, your own is purely defensive. Is any schoolboy or basketball player the humble pot is the most innumerable of objects, quite inoffensive. Only preoccupied persons like the umpire could possibly construe it as offensive. Again take the peo-shooter. Whoever heard of a schoolboy that used this mild little weapon for attack? As any boy knows, the use of the peo-shooter, like the water pistol, are solely for the warring off of attacks by others, especially those armed with peo-shooters.

And so it is with submarines and the Q-boat. It is highly effective, whereas we all know it to have been purely protective. During the war, some of the best submarines were those of the French and Japanese fleets. The undersea boat is the cheapest naval weapon for frightening off offenses, according to the tactician.

The sea is truth, quite evident. Weapons are defensive or offensive according to the use to which they are put. When you are attacked, you are the defender, and who is on the defensive, then, perhaps, you may decide whose weapons are offensive. Measurably, nations seem to proceed on the principle that if a club is defensive, three clubs and a machine gun are twice as defensive.

—Montreal Star.

Testing Out New Device

Invention May Prevent Flying Students From Frequenting Clubs.

A new device to overcome the danger of flying students "freelancing" the controls of aircraft is a plane has been developed by engineers of the department of national defense and is now undergoing thorough tests.

An arrangement whereby the instructor can disengage the student's controls in flight was found unsatisfactory, because once the student had overcome his momentary panic it was necessary for the aeroplane to land before his controls could be connected up again.

The new principle under test provides a jointed control stick that becomes automatically disconnected when too much pressure is applied to it, and yet resumes its usefulness when the student's grip relaxes. The lockers in the other cockpit is provided with a normal control stick and has control of the aircraft at all times. By pulling on his stick he can force the student's control out of joint.

Iceless Refrigerators

Colorado Farmers Have Inexpensive Means Of Keeping Food Cool.

Home-made iceless refrigerators are becoming unusually popular on many Colorado farms as an inexpensive means of conserving butter, milk, vegetables and fresh fruits, according to Mary Barthard, extension economist in home management for the Colorado Agricultural College.

The iceless refrigerators are made by attaching either run-proof covering or burlap over an empty orange crate. A covering of cotton flannel or some similar material is placed over the crate. The lower ends of the flannel covering are allowed to rest in a pan of water.

Changes in the climate keep the cloth wet, and evaporation causes the refrigerator to remain at a low temperature.

"What's that you're putting in your shirt pocket?" asked Murphy.

"Dynamite," whispered Donovan. "I'm waiting for Casey. Everytime he comes in he slaps me on the chest and breaks my pipe. Next time he does it he'll blow his head off."

"Ah," remarked the girl. "That's why some of us gals better matches than others."

Why Not Try Pool Elevators?

Alberta Pool elevators are now operating under
public license and are now in a position to handle any
grower's grain on the open market basis.

The excellent patronage extended to these Pool
elevators during the immediate past crop year, by many
growers who were never members of the Wheat Pool, is
testimony to the favorable reputation enjoyed by this co-
operative elevator organization.

The Alberta Pool elevators are being operated on a
basis of no discrimination between customers and with
the definite policy of extending fair and equal treatment
to all persons using its facilities. Why not give the Pool
elevator a trial?

Arrangements can be made to pool any portion of a
member's wheat that he may desire. Information re-
garding this can be furnished by your Pool agent.
